

"Challenges Day on Computational Mechanics"

Location · RICAM · Linz · Austria

21. October 2005

Call for Presentations

The purpose of this one-day event on

October 21, 2005

during the Special Radon Semester 2005
is the promotion of new computational techniques
for mechanical problems.

We invite scientists
from Austrian universities as well as other
Austrian research institutes to present and discuss
challenging problems in mechanics,

for which computational techniques are not yet available or,
if available, require significant further development.

The framework of the Special Semester
with the presence of a large group of international experts
gives the unique opportunity to discuss possible
novel strategies for tackling these problems
in a highly competent forum of scientists in
computational mathematics and mechanics.

For registration and further information please visit our web site.
